Quick and easy setup

Auto-Set™ automatically provides predefined weld settings for mild steel and aluminum while infinite voltage control allows the flexibility to manually set your own parameters with a digital readout.

Angled cast-aluminum drive system with calibrated tension knob creates consistent feeding and easy setup.

Quick Select™ drive roll makes setup quicker by offering three grooves — two for different size solid wire and a third for flux-cored wire.

Auto Spool Gun Detect™ automatically detects when a MIG gun or spool gun is connected, eliminating the need for a switch.

Smooth-Start™ provides a smooth, spatter-free start. It's the best-starting machine in the small MIG machine category.

Thermal overload protection shuts down unit if airflow is blocked or duty cycle is exceeded. Automatically resets when unit cools.

Fan-On-Demand™ cooling system only operates when needed, reducing noise, energy use and the amount of contaminants pulled through the machine.

Uses 4- or 8-inch (102 or 203 mm) spools and can be set up to weld with .024–.030 inch (0.6–0.8 mm) solid wire and .030–.035 inch (0.8–0.9 mm) flux-cored wire.

Comes complete with:

- Power source
- 10 ft. (3 m) MDX™-100 MIG gun
- 10 ft. (3 m) work cable with clamp
- 6.5 ft. (2 m) power cord with plug

Operation Modes

Auto-Set™ Mode

Auto-Set eliminates guesswork and saves you time on setup. Begin by pressing the Auto-Set button. The Auto-Set light indicates the mode is activated. Rotate the left knob to select wire diameter and the right knob to select material thickness.

Auto-Set parameters will hold when switching to manual mode.

Use Auto-Set when you want the speed, convenience and confidence of preset controls. Auto-Set automatically sets your welder to the proper parameters. Auto-Set predefined weld settings are configured for steel material with C25 gas mixture (75% argon, 25% CO₂) and aluminum material with argon gas when using a Spoolmate™ 100 or Spoolmate™ 150.

Manual Mode

When welding outside of Auto-Set's capabilities, or if you prefer custom parameters, use manual mode. The parameter chart on the inside of the access door is an easy-to-use guide for determining your voltage and wire feed speed settings.

To access manual mode, ensure that Auto-Set is off. Simply rotate the left knob to adjust voltage and the right knob to adjust wire feed speed.
